AIR TANK (^) FIXING STRUCTURE OF VEHICLE

HINO MOTORS LTD

Inventor(s): ASARI SHIGEYOSHI

Application No. 09287583 JP09287583 JP, Filed 19971006, A1 Published 19990420

Abstract: PROBLEM TO BE SOLVED: To provide an air tank (^) fixing structure for a vehicle whereby the mounting (^) and dismounting operations for an air tank (^) are facilitated.

SOLUTION: In the structure, a lateral frame 3 is supported detachably between a pair of chassis frames 1 in parallel laterally with each other, one end of multiple vertical frames 5 in parallel with the chassis frame 1 is fixed to the lateral frame 3, and the other end is mounted detachably to the cross member 2 of the chassis frame 1. Also a tank support holding the outer peripheries of one or multiple air tanks 7a and 7b which are mounted in lateral direction is mounted detachably on the vertical frame 5. Then the air tanks 7a and 7b mounted on the vertical frame 5 are tightened on the vertical frame 5 with a detachable clamp band 9.
